

## **LanTEK III Series Software Release Note**

Software Version: 3.113

Release Date: 09 OCT 2017

IDEAL NETWORKS announces the release of LanTEK III Series Software Release 3.113. This release contains the following enhancements from 3.112:

- Shield check in wiremap test changed so that a shield present in UTP tests will not cause a wiremap failure. This is to prevent wiremap failures when testing UTP cables in a data center environment. If shield continuity is detected during a UTP test the shield conductor will be shown on the wiremap results screen and the test result will pass.
- Added Draka cables to manufacturer cable database.
